SENIOR ARCHITECT

We are seeking a Licensed Architect to design and manage projects within MNA’s diverse field of expertise including bio-life sciences, education, industrial, and manufacturing. The Senior Architect will be responsible for managing the production efforts of large-scale, complex architectural projects, working with clients, and overseeing the team of architects to ensure project completing within scope.

COMPANY OVERVIEW

Mussett Nicholas and Associates provides customized architectural, engineering, and construction consulting services to our diverse client base ranging from education, biopharma, industrial and more. Our team is passionate about providing attention to the smaller details on every project and being attentive to the special needs and requests of our clients to deliver superior results.

JOB RESPONSIBILITIES

● Work closely with Project Manager and Principals throughout the project lifecycle to execute project plans.
● Work with Project Manager to ensure efficiency for assigned tasks and deliverables.
● Work directly with clients to identify project scopes, present technical and design solutions, and answer questions.
● Coordinate with engineering, consultants, clients, contractors, and building officials to meet overall project objectives.
● Research, organize, and implement life safety requirements, building codes, and industry standards on projects.
● Work with the engineering, design, and architect disciplines to ensure a consistent development and completion of assigned projects.
● Provide coaching and mentoring to junior architects.
● Conduct field inspections during construction to ensure compliance with the contract documents and design, addressing issues as needed.
● Troubleshoot problems on site and make recommendations to correct and move the project forward without compromising design integrity.
● May include special expertise roles and titles, such as lab planner, etc.

REQUIREMENTS

● Bachelor’s degree in architecture
● 10+ years relevant experience
● Architectural License Required
● Proficient in AutoCAD and Revit
● Expertise of various architecture and engineering disciplines, materials, principles, and practices
● Proven project management skills and ability to coordinate resources to ensure timely completion of projects.

● Ability to successfully work on multiple projects at once while meeting deadlines.
● Strong communication skills with the ability read, interpret, and present architectural information
• Ability to develop construction drawings, specifications and cost estimates for relatively simple buildings and modifications.
• Ability to conduct field studies and surveys, take measurements and gather data required for drafting plans and specifications.
• Superior problem-solving skills to identify complex problems, evaluate available options, and implement solutions.
• Ability to travel up to 10%, with occasional overnight travel.
• Must have and maintain a valid driver's license and clean driving record.
• Must have reliable transportation to conduct client site visits.
